

Power Apps Hands on Course Cohort II March 2024

1. Project Title:

Visitor Management

Target Industry: Banking

2. Project Goal

To provide an automated solution to replace the current physical paper process that captures personal data. this is error prone, susceptible to data loss and/or corruption and makes tracking of these records tedious as well expose personal information to data breaches.

3. Problem:

- Managing visits on paper is tedious and prone to error. This approach leads to:
- Poor customer experience filling in papers every time you do a visit.
- Data breach where personal data can be used maliciously.
- Can lead to loss of data by way of the physical book.
- Duplicate visitor entries as they are required to re-enter the same information on every visit.

4. As is Process:

1. A visitor arrives and is given a physical book to enter their data including name, reason for visit and company.
2. The captured data also includes check in time.
3. The security team will ask the visitor for the reason and who to see, they will then direct them to the appropriate building and contact.
4. The visitor proceeds to see the contact and then checks out by indicating the time they clock out.
5. Each day, the visitors' book is forwarded to the Security and Investigation Department for review (SID).

SAMPLE:

Date	Name	Company Name	ID No	Mobile No	Host	Reason for Visit	Time In	Time Out	Signatures	Initials
6/12/24	Tim Berners	ABC Company	405056	0700 100 100	Hela Bore	Support	0930	0950	#	#
6/12/24	Brigit Chelangit	ABC Company	405056	0700 100 100	Hela Bore	Engineer	0900	1000	#	#
"	Rey Kiprop	X Company	404046	0700 100 100	Victor Kiptoo	Support	1030	1100	#	#
"	Douglas Obarua	Y Company	606362	0700 100 100	Ngene Vido	Engineer	1150	1230	#	#

8/12/24	Elena Kiptoo	Y Company	575270	0710 100 101	Oliver Too	Support	1130	1200	#	#

5. To be Process:

- The Security representative to capture the following details about the user:
 - Name.
 - Company Name
 - ID Number.
 - Mobile Number
 - Host
 - Reason for visit
 - Time in
 - Time out
 - Duration (Calculate from Time in and Out)
 - Attachment- (Visitor's Photo)
- The host will be notified of the visitor via email and the security will call them on extension.
- The host will confirm the visit on the app and the visitor is directed to them.
- Once done, the visitor shall release the visitor and the security will confirm by checking them out at the exit.
- The SID team should have a high-level view of all **Pending, Active, Past visits**. They should also be able to select a particular visit to view details.
- The Host should only see their visits.
- The Security rep should only see Pending and Active visits, but they can search for previous visits based on ID to avoid

duplicate entries. If the visitor is not new, create an entry visit linked to the existing data.

Designing the Database Schema: SAMPLE

Guiding questions:

1. What problem will the app solve?
2. Who will use the app? Admin, Developer, User
3. What data is needed and their types?
4. How to store your data? SharePoint/Dataverse.
5. Modelling your data. Designing your data structure/ Schema
6. Integrating with external systems/services e.g. Outlook, Power Automate, SharePoint using **connectors**.

Table 1: Tickets

Field	Type	Source
TicketNo	Number [#001]	Autogenerated
Title	Single Text [Network Issue]	User Input
Description	Multiline Text [dfsdfafasf]	User Input
Screenshot	Image	User Input
Status	Choice [Open, In Progress, Resolved and Closed]	Based on activity
Priority	Choice [Low, Medium, or High]	Developer Update
App	Lookup [3]	User Selection
Category	Choice [Problem, Improvement]	User Selection
Created, Created By	Date/ Person	Default in SP
Comments	Multiline [safa] - RichText	Dev/User

ResolutionDetails	Multiline	Dev
ResolutionDate	Date	When the dev resolves.
ClosureDate	Date	When the user closes.
